Enterprise Content Management (ECM)

AUDIENCE

Practitioner, Developer

DESCRIPTION

This 1-day course is designed to introduce students to the installation and configuration of Content Server v16.0, internal OTDS, optional modules and Language Packs. This course focuses on Enterprise Information Management (EIM) from an administrator's perspective during the installation of Content Server on a Windows Server™ and managing its file system and configuration.

PREREQUISITES

- 1-0184 – Managing Documents in Content Server (or equivalent eLearning courses)
- 1-0185 – Collaborating in Content Server (or equivalent eLearning courses)
- 2-0113 – Content Server Workflow Design

HIGHLIGHTS

- Architectural overview including SEA, Servlet and system hardening
- Installing Content Server including pre-installation activities, service accounts, database, web and application server mappings
- Managing the Content Server file system and Reviewing key directories and configuration files
- Web-based installation and configuration of a Content Server instance
- Installation and configuration of internal OTDS
- Licensing of Content Server and optional Modules
- Installation of optional Modules, Core and Modular Language Packs
- Post-installation testing review, including a discussion regarding patching and upgrading

DESCRIPTION

Leading organizations in every industry are changing the face of engagement for employees, partners, and customers. The new business mandate is for anywhere access to real-time information and the ability to be more flexible and agile in response to changing business needs. To make this shift, leading companies are turning to the cloud – not only using cloud solutions internally but also using cloud solutions externally to engage with customers and partners. Already, cloud solutions have shown tremendous momentum. But, we are now seeing a shift in the way enterprises think about and use cloud solutions. Specifically, cloud usage is evolving from the point solution use cases of the past decade to broader, strategic cloud deployments that drive business results, customer experience, and innovation. No longer can companies approach cloud as a tactical one-off, developing a cloud strategy will be critical to realizing the true benefits of cloud solutions and services. In this session, guest Forrester Research VP and Principal Analyst Liz Herbert will discuss:

- The current state of cloud adoption: adoption data, drivers, and concerns
- How cloud is evolving from point solution to strategic enabler
- Addressing the three "S's" for cloud success: strategy, sourcing approach, and (organizational) structure
